

## Height Pole/ Measuring Stick Operating Instructions

- Fold the arm over until the arm is sitting in the groove on the bracket and then engage the safety catch.
- Always start by extending the smallest sliding section first.
- Before sliding out the next section make sure that the previous section is fully extend and that the lock button is in the locating hole.
- Extend any further sections until you reach the height required.
- The measurement is from the underneath of the 90 degree folded arm to the base of the pole outer body.
- The measurement is taken/read from the base of the last section that has been extended.

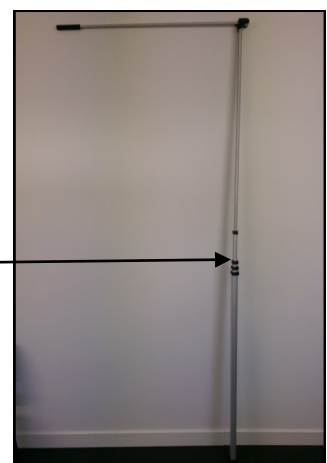

Folding arm bracket and safety catch.

Each section has a lock button. Always make sure button is engaged before extending the next section. Push button in to release section again.

Take measurement from the bottom of the last section that you extend.

**Warning:** Be aware of overhead objects and cables before extending height pole/measuring stick.  
**DO NOT** use near overhead cables
